None of prior art teaches that an oscillation/echo canceller system comprises a hollow main body having an insert section provided with an opening and adapted to be inserted into the canal of the ear, a microphone for taking sound signals being transmitted as air vibrations into the main body by way of the opening of the insert section, and a speaker having a sound emitting hole and adapted to boost the sound signals received from an external transmitter/receiver, and the system being designed to establish a bidirectional communication with external transmitter/receiver, as specifically claimed in claim 1, wherein the speaker is arranged with the sound emitting hole which is directed to the opening of the insertion and provided with even number of sound emitting canals, wherein the sound emitting canals are formed between the

sound emitting hole and the opening of the insert section and have identical lengths and identical inner diameters, the even number is equal to two or even number times of two, the microphone is arranged remotely from the opening of the insert section than the sound emitting hole of the speaker, and wherein the sound collecting canal of the microphone for collecting sounds from the opening is made of material incapable of collecting sounds from the sound emitting canals of the speaker except the sound collected by way of the opening of the insertion section.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
